**1,208**

Confirmed of 2,162 expected

**403**

Surgeries done of 408 needed

### BLINDNESS · AWC

**7**

Identified at AWC

**12**

RBSK confirmed

### HEARING IMPAIRMENT · AWC

**62**

Identified at AWC

**106**

RBSK confirmed

All figures are taken directly from the RBSK 2021-2026 block-wise data and AWC screening data for Vellore District.

# Recommendations

---

## 01 Close the detection gap

Across 2021–2026, 2,162 cases were expected but 1,208 confirmed. Strengthen screening coverage and confirmatory diagnostics, prioritising the widest gaps — Congenital Deafness (393 expected, 45 confirmed) and Neural Tube Defect (393 expected, 12 confirmed).

## 02 Complete the remaining surgeries

Of 408 children needing surgery, 403 are done and 5 remain due — 3 for Coronary Heart Disease and 2 for Cleft Lip / Palate. Fast-track these pending cases to close the surgical line.

## 03 Focus on Vellore Corporation

The Corporation accounts for the largest shortfall — 66 confirmed against 596 expected across all conditions. Direct additional screening camps and follow-up support there, and to other blocks with low confirmed-to-expected ratios.

## 04 Strengthen AWC-level screening and referral

AWC identification trails RBSK confirmation for blindness (7 vs 12) and hearing impairment (62 vs 106), with wide block-level divergence (e.g. Vellore 25 identified vs 7 confirmed; K.V.Kuppam 3 vs 19). Align AWC screening and cross-referral with RBSK teams.
